Post Title: PhD Studentship in Information Retrieval (PhD_IR_AC)

Anticipated start date: September 2021 / October 2021

Stipend: €18,500 per annum (non taxed) plus university fees

Closing Date: 12th April 2021

Apply: https://forms.gle/G5aCAFLbgjRCx5vFA

Why ADAPT?

- **Contribute** to the ADAPT research agenda that pioneers and combines research in AI driven technologies: Natural Language Processing, Video/Text/Image/Speech processing, digital engagement & HCI, semantic modeling, personalisation, privacy & data governance.
- **Work** with our interdisciplinary team of leading experts from the complementary fields of, Social Sciences, Communications, Commerce/Fintech, Ethics, Law, Health, Environment and Sustainability.
- **Leverage our success.** ADAPT’s researchers have signed 43 collaborative research projects, 52 licence agreements and oversee 16 active commercialisation funds and 52 commercialisation awards. ADAPT has won 40 competitive EU research projects and obtained €18.5 million in non-exchequer non-commercial funding. Additionally, six spinout companies have been formed. ADAPT’s researchers have produced over 1,500 journal and conference publications and nearly 100 PhD students have been trained.

As an ADAPT funded PhD researcher you will have access to a network of 85 global experts and over 250 staff as well as a wide multi-disciplinary ecosystem across 8 leading Irish universities. We can influence and inform your work, share our networks and collaborate with you to increase your impact, and accelerate your career opportunities. Specifically we offer:

1. Opportunity to build your profile at international conferences and global events.
2. A solid career pathway through formalised training & development, expert one-on-one supervision and exposure to top specialists.
3. A Fully funded, 4 year PhD postgraduate studentship which includes a stipend of (€18,500 per annum - non taxed), along with equipment, annual travel funding
4. Funding for annual student fees

Context

The aim of this PhD is to explore challenges of responsible AI in Personalised Information Retrieval. The project will investigate Fair, Accountable, Confidential, Transparent, Safe (FACTS) AI approaches at personalised information retrieval. Major challenges in this field include the accountability of AI algorithms for the generation of ranked results.

In this context the investigation will focus on the balance between the performance of the algorithms and their fairness and scrutability/interpretability to generate explanations for the users. The PhD
will also focus on privacy aware personalisation, which concerns the investigation/definition of user profile that guarantee privacy protection. The student will investigate techniques and define appropriate approaches to balance privacy and accuracy of algorithms.

You will work within a large group of Academics, Postdoctoral researchers, PhD students and Software Developers and will research the specialist area of Information Retrieval, specifically Fair Accountable and Transparent proactive Information Retrieval. As part of this studentship, you will have the opportunity to:

- Design and deploying new algorithms in the specific area of FAT proactive IR;
- Design of appropriate research methodology and evaluation protocols for the proposed ideas and models;
- Enhance your reputation through publishing in top-quality journals and conferences in collaboration with team members
- You will have the opportunity to nationally and internationally present and represent the ground breaking research carried out by you and the research team;
- Contributing to short-term, focused industry projects with ADAPT.

On completion of the PhD program the candidate:

- Will have demonstrated understanding of the problems related to FACTS AI and IR, and have mastered the skills and methods of research in this field;
- Will have demonstrated capabilities of defining, designing and implementing appropriate research methodologies with academic integrity and made substantial contribution that extends the knowledge in the field;
- Be able to communicate concepts and research outputs with their peers and the research community at large and with people outside the field.

**Training & Development**

Advanced training, in the form of accredited modules, known as ‘Graduate Training Elements’ or GTEs, are an important aspect of DCU’s graduate research experience. Information on graduate training at DCU is available here: [https://www.dcu.ie/graduatestudies/training.shtml](https://www.dcu.ie/graduatestudies/training.shtml). The successful student will be expected to undertake and pass a minimum of 20 credits of taught modules for the duration of their studies.

As part of the studentship you will also undertake the following training opportunities training:

- Orientation
- Health & Safety
- Intellectual Property (IP)
- Data Protection (GDPR)
- Other training may need to be undertaken when required

**Minimum qualifications:**
Applicants should have a strong undergraduate (2.1 or above) or Masters degree in Computer Science, Computer Engineering or related degree.

To register for a Postgraduate Research programme, a candidate must normally have obtained a primary degree classification equivalent to Lower Second Class Honours or above, from an approved University or an approved equivalent degree-awarding body, or have an approved equivalent professional qualification in an area cognate to the proposed research topic. See http://www.dcu.ie/registry/postgraduate/faq.shtml#q3

English language requirements for non-native speakers of English is available here: https://www.dcu.ie/registry/english.shtml

Preferred qualifications:
- Excellent communication, teamwork and organizational skills.
- Problem-solving skills
- Aptitude for technology
- Experience of the research process (at least an undergraduate level)
- Strong data and statistical analysis skills
- Must be eager to work in and learn from a multi-disciplinary multi-organisation team
- Demonstrated proficiency in software development with strong design and programming skills.

Advantageous experience
- Experience with communicating research and/or science to a lay audience
- Knowledge of Information Retrieval, Recommender System, Machine Learning and/or Deep Learning is a distinctive advantage.

Informal enquiries about this position can be made via email to Prof Annalina Caputo (annalina.caputo@dcu.ie) referencing ‘PhD_IR_AC’ in the subject line.

Application Process
Each application should only consist of
1) a detailed CV,
2) transcripts of degrees,
3) the name and email contacts of two academic referees,
4) a letter of introduction (max 3000 words). In the letter, applicants should include the following details:
   a) An explanation of your interest in the research we plan to conduct and why you believe they are suitable for the position.
   b) Details of your final year undergraduate project (if applicable)
   c) Details of your MSc project (if applicable)
d) Details of any relevant modules previously taken, at undergraduate and/or Master level.

e) 5. Details of any relevant work experience (if applicable).

Diversity

ADAPT is committed to achieving better diversity and gender representation at all levels of the organisation, across leadership, academic, operations, research staff and studentship levels. ADAPT is committed to the continued development of employment policies, procedures and practices that promote gender equality. On that basis we encourage and welcome talented people from all backgrounds to join ADAPT.

About the ADAPT Centre

ADAPT is the world-leading SFI research centre for AI Driven Digital Content Technology hosted by Trinity College Dublin. ADAPT’s partner institutions include Dublin City University, University College Dublin, Technological University Dublin, Maynooth University, Munster Technological University, Athlone Institute of Technology, and the National University of Ireland Galway. ADAPT’s research vision is to pioneer new forms of proactive, scalable, and integrated AI-driven Digital Content Technology that empower individuals and society to engage in digital experiences with control, inclusion, and accountability with the long term goal of a balanced digital society by 2030. ADAPT is pioneering new Human Centric AI techniques and technologies including personalisation, natural language processing, data analytics, intelligent machine translation human-computer interaction, as well as setting the standards for data governance, privacy and ethics for digital content.

Our Research Vision

Governments and civil society are starting to recognise the need for urgent and concerted action to address the societal impact of the accelerating pace of digital content technologies and the AI techniques that underpin them. ADAPT provides an ambitious, ground-breaking, integrated research programme that assembles three interlocking Strands that together are capable of addressing this challenge. Each of these complementary and reinforcing research Strands takes one of the different perspectives on the provision of personalised, immersive, multimodal digital engagement, i.e. the individual’s experience and control of the engagement, the algorithms underlying digital content processing, and the balanced governance by enterprise and societal stakeholders.

Digitally Enhanced Engagement Strand

From the individual perspective, research within this Strand will deliver proactive agency techniques that sense, understand and proactively serve the needs of individual users to deliver relevant, contextualised and immersive multimodal experiences which also offer them meaningful control over the machine agency delivering those experiences.
Digital Content Transformation Strand
From the algorithmic perspective, new machine learning techniques will both enable more users to engage meaningfully with the increasing volumes of content globally in a more measurably effective manner, while ensuring the widest linguistic and cultural inclusion. It will enhance effective, robust integrated machine learning algorithms needed to provide multimodal content experiences with new levels of accuracy, multilingualism and explainability.

Transparent Digital Governance Strand
From the enterprise and societal perspective, new structured knowledge frameworks and associated practices for AI data governance will be required to balance the needs and values of individuals, organisations and society when it comes to rich digital experiences. This requires the advancement of research in the areas of data ethics, data quality, data protection, data value, data integration, and multi-stakeholder governance models.
