Post Title: PhD Studentship in Human Activity Monitoring via Wireless Signals
Location: Technological University Dublin
Anticipated Start Date: October 2021
Closing Date: July 30th
Reports to: Dr. Susan McKeever and Dr. Robert Ross, Technological University Dublin
Apply: https://forms.gle/Ew1Th3ptYSTr3ub69

Why ADAPT?

- **Contribute** to the ADAPT research agenda that pioneers and combines research in AI driven technologies: Natural Language Processing, Video/Text/Image/Speech processing, digital engagement & HCI, semantic modeling, personalisation, privacy & data governance.
- **Work** with our interdisciplinary team of leading experts from the complementary fields of, Social Sciences, Communications, Commerce/Fintech, Ethics, Law, Health, Environment and Sustainability.
- **Leverage our success.** ADAPT’s researchers have signed 43 collaborative research projects, 52 licence agreements and oversee 16 active commercialisation funds and 52 commercialisation awards. ADAPT has won 40 competitive EU research projects and obtained €18.5 million in non-exchequer non-commercial funding. Additionally, six spinout companies have been formed. ADAPT’s researchers have produced over 1,500 journal and conference publications and nearly 100 PhD students have been trained.

As an ADAPT funded PhD researcher you will have access to a network of 85 global experts and over 250 staff as well as a wide multi-disciplinary ecosystem across 8 leading Irish universities. We can influence and inform your work, share our networks and collaborate with you to increase your impact, and accelerate your career opportunities. Specifically we offer:

1. Opportunity to build your profile at international conferences and global events.
2. A solid career pathway through formalised training & development, expert one-on-one supervision and exposure to top specialists.
3. A Fully funded, 4 year PhD postgraduate studentship which includes a stipend of (€18,500 per annum - non taxed), along with equipment, annual travel funding
4. Funding for annual student fees

**Context**

There are many uses for understanding the movement and activities of people in an indoor space; such as within a nursing home to ensure that residents do not wander at night, elderly care motoring in their home, or to enable security surveillance applications. Activity monitoring and recognition has been an active area of research for over two decades. However, privacy and practical concerns around wearing sensors, or being actively tracked are potential barriers to adoption.
Interestingly, human bodies are good reflectors of wireless signals. As a result, human presence and activities can be recognized by monitoring changes in wireless signals in a space. This provides a potentially cheap non-intrusive way to monitor activity levels in spaces of interest. This project will focus on how to monitor the activities and well-being of individuals and groups in a space - using non-intrusive wireless signals.

The proposed PhD research will enable the successful applicant to become an expert in state-of-the-art machine learning techniques applied to a human monitoring problem that is widely applicable across many domains including health, public services, education, and retail. The candidate will be in a position to work in ICT organisations in a research capacity in Artificial Intelligence.

**Minimum qualifications:**

- 2-1 (upper second class) Primary Degree in Computer Science, Computer Engineering or similar discipline.
- English language requirements at TU Dublin for non-native English speakers are here: https://www.tudublin.ie/study/international-students/entry-requirements/english-language-requirements/

**Preferred qualifications:**

- MSc in Computer Science or similar discipline.
- Digital Signal Processing knowledge would be an advantage
- Strong analytical skills and problem-solving skills;
- Practical experience and conceptual knowledge of machine learning;
- Experience doing research in any topic;
- Academic publication track record;
- Experience working on collaborative research with industry or other stakeholders;
- Excellent written and verbal communication skills.

**Application Process**

Each application consist of

1. Detailed curriculum vitae, including – if applicable – relevant publications;
2. Transcripts of degrees,
3. The name and email contacts of two academic referees,
4. A cover letter/letter of introduction (max 2000 words). In the letter, applicants should include the following details:
   a. Why you wish to undertake a PhD;
b. An explanation of your interest in the research to be conducted in this project and why you believe you are suitable for the position. This can include any ideas/approaches you have for this particular project on human monitoring using wireless signals.

c. Details of your final year undergraduate project (if applicable)

d. Details of your MSc project (if applicable)

e. Details of any relevant modules previously taken, at undergraduate and/or Master level.

f. Details of any relevant work experience (if applicable).

g. Any awards or highlights of your career or studies to date

Diversity

ADAPT is committed to achieving better diversity and gender representation at all levels of the organisation, across leadership, academic, operations, research staff and studentship levels. ADAPT is committed to the continued development of employment policies, procedures and practices that promote gender equality. On that basis we encourage and welcome talented people from all backgrounds to join ADAPT.

About the ADAPT Centre

ADAPT is the world-leading SFI research centre for AI Driven Digital Content Technology hosted by Trinity College Dublin. ADAPT’s partner institutions include Dublin City University, University College Dublin, Technological University Dublin, Maynooth University, Munster Technological University, Athlone Institute of Technology, and the National University of Ireland Galway. ADAPT’s research vision is to pioneer new forms of proactive, scalable, and integrated AI-driven Digital Content Technology that empower individuals and society to engage in digital experiences with control, inclusion, and accountability with the long term goal of a balanced digital society by 2030. ADAPT is pioneering new Human Centric AI techniques and technologies including personalisation, natural language processing, data analytics, intelligent machine translation human-computer interaction, as well as setting the standards for data governance, privacy and ethics for digital content.

Our Research Vision

Governments and civil society are starting to recognise the need for urgent and concerted action to address the societal impact of the accelerating pace of digital content technologies and the AI techniques that underpin them. ADAPT provides an ambitious, ground-breaking, integrated research programme that assembles three interlocking Strands that together are capable of addressing this challenge. Each of these complementary and reinforcing research Strands takes one of the different perspectives on the provision of personalised, immersive, multimodal digital engagement, i.e. the individual’s experience and control of the engagement, the algorithms underlying digital content processing, and the balanced governance by enterprise and societal stakeholders.

Digitally Enhanced Engagement Strand
From the individual perspective, research within this Strand will deliver proactive agency techniques that sense, understand and proactively serve the needs of individual users to deliver relevant, contextualised and immersive multimodal experiences which also offer them meaningful control over the machine agency delivering those experiences.

**Digital Content Transformation Strand**
From the algorithmic perspective, new machine learning techniques will both enable more users to engage meaningfully with the increasing volumes of content globally in a more measurably effective manner, while ensuring the widest linguistic and cultural inclusion. It will enhance effective, robust integrated machine learning algorithms needed to provide multimodal content experiences with new levels of accuracy, multilingualism and explainability.

**Transparent Digital Governance Strand**
From the enterprise and societal perspective, new structured knowledge frameworks and associated practices for AI data governance will be required to balance the needs and values of individuals, organisations and society when it comes to rich digital experiences. This requires the advancement of research in the areas of data ethics, data quality, data protection, data value, data integration, and multi-stakeholder governance models.
